## THE PROJECT

A.A. was founded by Anonymous Analyst & Anonymous Arnold both seasoned experts in a wide range of different industries from Finance & Blockchain to Crypto & Art.

We managed to put a professional team together with the best 3D modellers, vfx & animation artists, illustrators, developers and many more who are joining the forces.

Creating the art of the future on the XRPL & SGB Networks with a dedicated ecosystem. \$AAX is an XRPL utility token used within the Anonymous Astronauts ecosystem. \$AAX will connect both real world & the A.A. metaverse experience!

We strive to become one of the most innovative projects within the space & bring the best user experience for the whole A.A. community.

"We entitled our NFT collections 'Anonymous Astronauts' - 'A.A.' on behalf of our Youtube channel dedicated to cryptocurrencies and the 'Astronaut' as a famous symbol in the crypto space."

Anonymous Astronauts is composed of 2 projects running through 2 blockchains: XRP Ledger (XRPL) and Songbird Network (SGB).

- The first project is named Anonymous Astronauts XRPL also known as 'AAXRPL'
- The second one is called Anonymous Astronauts SGB also known as 'AASGB'

For each project, we will deliver unique NFT collections which will grant amazing utilities for their holders.

## OUR MISSION

We strive to provide the best space journey for our community by granting them amazing artworks coupled with the best possible utilities.

Our NFTs collections aim to unleash the maximum value for them with passive income in \$AAX and XRP to drive them to financial freedom creating a complete eco system in both real world and our metaverse game application.

## OUR VISION

With the rise of NFTs market reaching \$40Bn in 2021, we feel convinced that A.A. project will cover the main expectations such as a smooth user experience, earning passive income, in-game utility, metaverse access, ...

To deliver all these benefits we selected the most efficient blockchains which will be a standard in the near future.

## **THE BLOCKCHAIN**

Blockchain is a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. A blockchain is essentially a digital ledger of transactions that is duplicated and distributed across the entire network of computer systems on the blockchain.

## **XRP LEDGER**

The XRP Ledger (XRPL) is a decentralized, public blockchain led by a global developer community.

It's fast, energy efficient, and reliable. With ease of development, low transaction costs, and a knowledgeable community, it provides developers with a strong open-source foundation for executing on the most demanding projects—without hurting the environment.

To deliver all these benefits we selected the most efficient blockchains which will be a standard in the near future.

## **FLARE NETWORK**

Connect Everything,

Flare is a new Layer-1 blockchain which enables secure universal interoperability between chains - scaling the use of blockchain by enabling all digital assets and onchain information to flow freely. This is cross-chain interoperability with the security of multi-chain.

## **SONGBIRD NETWORK**

A “Canary network” is an operational blockchain with a defined (and hence scarce) token supply that is intended to be used to test features for a related main net.

Songbird is the Canary network for Flare, it will have two distinct phases. Prior to the launch of Flare, Songbird will be instrumental in the continued testing of the Flare Time Series Oracle, the StateConnector and F-Asset systems and the network architecture.

In all periods Songbird has two other core uses.

First, advanced testing and community building for applications that wish to launch on Flare.

Second, as a way for FLR token holders to familiarize themselves with key Flare protocols such as delegation to the FTSO, minting of F-Assets and usage of applications that build on Flare without putting their FLR tokens at risk.

## **NON FUNGIBLE TOKENS "NFTs"**

A NFT is a digital asset that represents real-world objects like art, music, in-game items and videos. They are bought and sold online and they are generally encoded with the same underlying software as many cryptos.

Although they've been around since 2014, NFTs are gaining notoriety now because they are becoming an increasingly popular way to buy and sell digital artwork. The market for NFTs was worth a staggering \$40 billion in 2021 alone, an amount that is approaching the total value of the entire global fine art market.

NFTs are also generally one of a kind, or at least one of a very limited run, and have unique identifying codes. “Essentially, NFTs create digital scarcity,” says Arry Yu, chair of the Washington Technology Industry Association.

Anonymous Astronauts The XRP Army!

All unique designed XRP minded 3D avatars with each of them their own characteristics, looks & skills.

The XRP Army is well known throughout the whole universe for their power to survive, therefore many species have traveled across planets to join the XRP Army and defend the Crypto Space from the upcoming evil!

Each model/avatar will be 100% unique and act as your entry ticket to the A.A. Metaverse game experience.

Avatar 3D model creation starts with a specific idea or story behind each character. It is needed to determine how the actual model will look. It is easier to copy "famous" people and re-model than to create 100% unique models. Drawing, sculpting, scetching, creating the perfect accesoires, rendering, rigging,...

Eye for perfection is key to provide & create the best personalised avatars.

**We strive to build the best user experience for the XRPL with many features like:**

- Space Station X (Metaverse Main Zone)
- Avatar traits shop
- Avatar leveling
- Multiplayer
- P2E
- Mini games
